What is the Difference Between G-Suite Core and Public Services?

Students, faculty, and staff will be able to distinguish the difference between core and public services offered through G-Suite. This article provides a general overview of both Google core and public services. For more information on specific apps available through G-Suite, see the UConn Email website.

G-Suite is the collective name for the group of Google apps available to UConn. This includes but is not limited to Gmail, Google Docs, Google Drive, and Google Calendar.

G-Suite Core Services
Core services are apps covered under the University's Google enterprise agreement. Core services include Gmail, Google Calendar, Google Drive, Google Hangout, Google Sites, and Google Groups.

G-Suite Public Services
Public services fall outside of the University’s Google enterprise agreement and require users to agree directly with Google’s terms of use. Users must opt-in to gain access to public services. The public services content is a dynamic list as Google offers new products and expires old services. Some examples of current public services are Google+, Picasa Web Albums, Google Analytics, Blogger, YouTube, Google News, and Google Places.
