Finding the MAC Address of OSX Devices

Students, faculty and staff can find the MAC address of OSX devices, which is needed for certain programs.

Finding the Wired MAC Address

1. Click on the Spotlight icon in the top right-hand corner of the screen and type in Network Utility.
2. Select Network Utility from the drop-down menu.
3. To determine the Wired MAC address, select Ethernet from the network interface drop-down menu.
4. The device’s MAC address will be listed under “Hardware Address”.

Finding the Wireless MAC Address

1. Click on the Spotlight icon in the top right-hand corner of the screen and type in Network Utility.
2. Select Network Utility from the drop-down menu.
3. To determine the Wireless MAC address, select AirPort (or Wi-Fi for OSX 10.7 and above) from the network interface drop-down menu.
4. The device’s MAC address will be listed under “Hardware Address”.
